

CAN-AM Maverick X3 Signature Turn Lights

Thank you for purchasing XTC Power Products CAN-X3-STL. With the included adapter these new lights interface with XTC Power Products Turn Signal System. When the Signal is not engaged the lights are white, when the associated turn signal is engaged the light blinks amber for the turn.

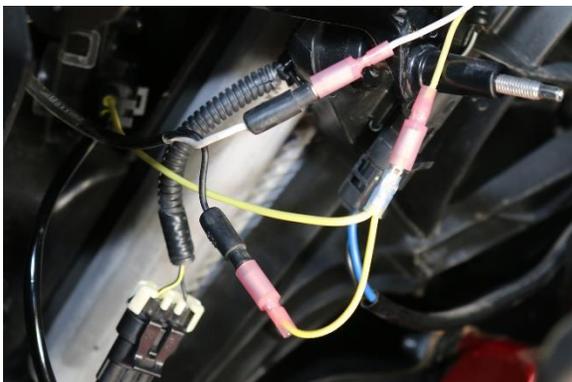

For more details on installation go to www.xtcinstall.com

Please read the instructions fully and familiarize yourself with the components before starting the install.

1. **Un-plug the connector** – from the light by pulling up on the TAB while pulling out.
2. **Remove the OEM Lights** – following the manufactures guide remove the front plastic grille and replace both the lights with the new Signature Turn Lights.
3. **Plug the Adapter** – with the yellow wire into the new light
4. **Connect the adapters** – open end to the OEM light plug

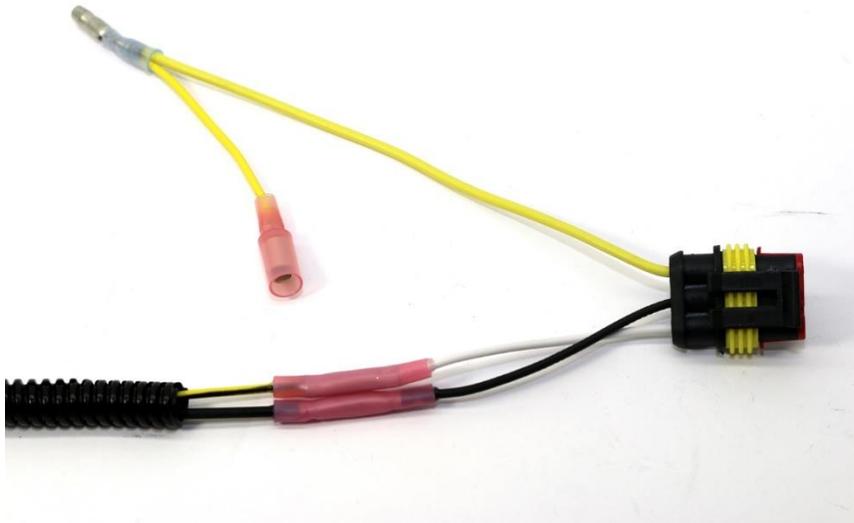

5. **Plug the Turn Signal** – wire into the yellow plug on the adapter. The adapter provides a secondary female bullet connector output for the original signal.

6. Test the system- and secure the harness using the included cable ties.

XTC has included two heat shrinkable butt connectors. The adapter can be shortened to make easier to hide under the Light, we also find it more reliable.

1. Cut the adapter cable at 2.5" from the connector that has the yellow wire. Discard the other side.
2. Cut the plug off the OEM cable about 1" from the connector and trim the plastic cover back.
3. Strip the four wires.
4. Crimp the white wire to the OE Yellow/Black stripe wire
5. Crimp the black OE wire to the black adapter wire.
6. Using a heat gun, shrink the ends of the butt connectors, plug into light and attach turn signals per the included instructions.
7. Cable may be wrapped with electrical tape or exterior harness tape
8. Verify operation and secure with the included cable ties.
